

# New! Conjugated Primary Antibodies

Simplify your staining with our fluorophore-conjugated primary antibodies

## We're Shining Light On Our Entire Product Line...

Our entire line of NeuroMab and Antibodies Inc. antibodies will now be offered with the option of direct conjugation to one of four different fluorophores: **FL490** | **FL550** | **FL594** | **FL650**

What do goats, guinea pigs, and chickens all have in common? Antibodies made in these animals are all extremely popular for use in multiplex/multicolor staining. When designing multicolor staining panels scientists are typically forced to use compatible primary antibodies based on host species—one mouse antibody, one rabbit antibody, one guinea pig antibody... In many cases this prevents scientists from using their favorite antibodies, simply because they are from the same host species. Fluorophore-conjugated antibodies eliminate this issue since the molecule used for fluorescent detection is directly conjugated to the primary antibody.

By offering our NeuroMab antibodies directly conjugated to ultra-bright fluorophores, scientists can now use these rigorously-validated antibodies to design multicolor staining panels without limitations. Unlock the potential of our full catalog of brain-validated antibodies by exploring our antibody conjugates today!

*ICC staining showing comparable signal from our anti-Ataxin-1 antibody using a directly labeled FL490 conjugate (left) and a primary + secondary antibody combination (right) in Ataxin-1 overexpressing cells.*

# 500 Products. 4 Ways. Simplify Your Assay.

2,000 conjugated primary antibodies to meet your scientific needs.

## Optimize Your Results.

Perfect for IHC and ICC, our conjugated primary antibodies help to reduce background and save you time. Available in 4 different wavelengths—490 nm, 550 nm, 594 nm, and 650 nm, they work great in both single and multiplexing applications, and are available in both single vial and **bulk** formats.

We are excited to offer both unconjugated and conjugated options as well as secondary antibodies to researchers looking to customize their research and optimize their results!

**Distributed by:**
