

Foetal Bovine Serum

Of all the different types of animal serum available, Foetal Bovine Serum (FBS) is the most widely used basal media supplement for *in vitro* cell culture. FBS contains very low level of antibodies, and a higher concentration of growth factors when compared with adult or newborn bovine sera. This means that FBS is effective in promoting and sustaining the growth of both mammalian and insect cells. Our Quality Assurance process ensures each batch of FBS is fully tested prior to release. Full QA Certification supplied.

FEATURES

- Filtered - triple 0.1 μm filtered
- Sterility tested for the absence of bacteria, fungi, yeast and mycoplasma
- Viral tested for bovine diseases BVD-V, PI3, IBR and BVB-AB
- Biological performance is assessed for cell growth, plating efficiency and cloning efficiency
- Low endotoxin levels
- LSG is a Traceability Certified member of the International Serum Industry Association (www.serumindustry.org)

CliniSciences Group

BENEFITS

- Competitively priced
- A selection of batches and origins
- Samples available for batch testing
- No minimum order quantities
- A full range of cell culture media and associated reagents are also available. A full listing of products and services visit www.lifescienceproduction.co.uk

Ordering Information

S-001A-X	Foetal Bovine Serum- Aseptically Filled* 500 mL
S-001B-X	Foetal Bovine Serum- Aseptically Filled* 100 mL
S-001C-X	Foetal Bovine Serum- Aseptically Filled* 50 mL

* provided Dialyzed, Gamma Irradiated or Heat Inactivated

NOTE: the 'X' in the product code denotes pack size and origin. Please state pack size required at time of order. Please note there is a charge per delivery.
